2003.5.18: An Australian witness in the intermediate class, Vienna, 18/May/2003. His doctor claimed that he may stay on a wheelchair for the rest of his life due to an occupational accident that broke his spine, but after a few adjustment conducted by sister Hung (left on the photo), who was graduated from the Vienna intermediate class on May 9th, he can now walk on foot without assistance. He appreciates Longevityology and sister Hung give him and his family a hope to live again. (Based on this case, you can see that even an intermediate class volunteer can help others only if you are willing to reach out your hands.)
