

no bad reaction from the wound (from the past experience, if the wound been wet with water, the wounded area would spread and reaction occurs), checked the wound again today, no scar observed.

Late August, went with my wife to the treatment centre to join and learn the regulation of volunteer work. The first day, worked with teaches Choy and other volunteers, there were two old men with lots of old people's problems, I spent extra time in applying adjustments, usually I start with C7 and work the way down to C2. One man named Mr.Wong usually comes with his wife, he says my "chi" is very strong, that lifted up my confidence. After applying adjustments, my hands do not feel tired. On 13th September (the day before mid-autumn festival), when I was applying adjustments to Mr.Wong, I could feel as though his skull was breathing in and out, amazing feeling..

I would continue to attend the advance course, learn more about "Longevityology", to self heal and heal people.

Symptoms and adjustments : Knife wound, C7 + affected area.
