My parents learned Longevityology, so this word is not new to me; I became interested in Longevityology started 4-5 years ago. My wife's health not very good, went to the hospital for investigations. And found the white and red blood cells abnormal, we were worried and anxious because of the result. Then after three days, repeated the test, the condition has gone worse, and asked the doctor what is the cause of this condition? The doctor could not give an answer to this; he said this is probably due to the problem with the immune system. Therefore, we followed the doctor's advice, commenced further investigations and treatment for a few weeks, her condition did not improve but got worse. Then my parents knew about our situation, and came to apply adjustments for her. After two treatments, noticed obvious changes in her condition. Therefore, Longevityology is deep in my mind, due to busy workload at work, could not make time to learn.

In August 2007, at last I could make time to participate and completed the primary and intermediate courses. Then practised 6 times on and off and completed in 2 years, so I enrolled to learn the advance course, with this opportunity hoping to see and enjoy the atmosphere and the beauty of Longevityology hall.

During the primary course and had the chakras opened, those three days I did not have much reaction (although I was doing exercises). Then during the intermediate course, on the second day after I had the chakras opened, went home, I felt that a kind of sweet taste coming out from the upper jaw. I thought it was due to bad temperamental feelings, but when the temperamental feeling here, this sweet sense of taste has disappeared. This sense of sweet taste feels like layer of plum powder has been showered inside the mouth, very noticeable. While applying adjustments and the hands are in the right places, this sense of sweet taste would increase, so I know this is not psychological! Because this sense of sweet taste remains unchanged until now.

Since I learned Longevityology, because of work, not a lot of opportunity to go to the centre to do voluntary work, but I have lots of experience and practices on my relatives. Because my mother-in-law had breast cancer, during chemotherapy she was unwell with lots of discomforts. I applied adjustments for her, she would
