

Fractured clavicle – no more pain.

Learner : Ms. Chow

Address : Taipei city. Manshan district.

Tel: +886-2-8931035

Have problem with my heart, feel uncomfortable when seasonal changes, once I even had pain in the heart. This summer completed the intermediate course, I do meditation and self-healing, and then I do not have that uncomfortable feeling.

On 1st September this year, my young son the first day at school, the last lesson was physical education, it was raining a bit and he was waiting for me in the court for basketball. By accident, he slipped and complained of pain, taken to accident and emergency room, had x-ray done, showed he has fractured the clavicle, but did not require operation or apply plaster, given some analgesic by the doctor and then went home when his condition stabled. After we got home, I applied Adjustments for him, gently placed my hand on his shoulder, in the beginning, it was painful, and then he went to sleep, until noon the next day, generally looking well. Went back to the outpatient department, doctor said the same thing, returned home and again placed my hands on his shoulder. On the third day morning going back to school, he said he has no pain (as long as he did not raise his arm), he did not take analgesic, for it was not painful. On the fourth day, he was able to bath and dress himself, because he did not have pain, he is playing again. Then on 9th September, went back to the out-patient clinic to repeat x-ray, the doctor said the fractured bone not straight and advised to reduce movement of the affected shoulder. So, Longevity able to reduce pain.

With that incident, it makes me feel that Longevity able to heal general wounds and pain, able to heal the uncomfortable feeling in the heart, increase blood flow within the blood vessels. Although my experiments not adequate, but think this gives me confidence to help people.

Symptoms and adjustments : Fractured clavicle – C7 + affected area.
