I have been suffering from anaemia, low blood pressure for years, also had to look after my daughter who is not very healthy. These make my body usually feel tired and weak, low energy, often have headaches.

Because of my daughter's condition, a friend of mine recommended Longevity to me. Therefore, I enrolled for the primary and intermediate courses, after chakras opening, at home that night my headaches got worse, but after a night resting and sleeping, next morning, my headaches and the uncomfortable feeling have gone. I thought; it must be a good reaction, felt the energy increased my health a lot better than before, until now, no more headaches occurred.

When my daughter was being born, during delivery she inhaled meconium, had to be treated with antibiotics. In addition, all other conditions, making me physically and emotionally tired. Two years old, she has no energy to crawl, the whole body is weak, no strength, face and eyes look dull, not uttering any word. Being treated at the centre, also I would apply adjustments for her at home, now 2 months already, my daughter is looking well, a bit more energetic, facial expression much improved. Before she could not hold the feeding bottle, now she holds the bottle; she could not play with toys, now she plays with toys; she could not crawl, now she is learning to crawl. She is sitting straight, shape of her head is more developed, how any one not to say universal energy really a miracle can!

My mother's health has been weak and suffers from other ailments; the past couple of years spent a lot of time in bed. I started to apply adjustments for her, also keep on asking and taking her to the healing centre for treatment. A month passed, now she is able to go out and do shopping, do house work, condition much improved, she is getting more confidence, the energy making her feel good, she also wants to recommend Longevity to the people living close to her.

Once I was going back to TaiChung, helped my grandmother and applied adjustments to her knees (degenerative arthritis), after half an hour of adjustments, her knees was more painful, asked her to bear the painful a bit longer, another half
