In spring 2006, one day, an elderly man accompanied by his family members, staggering into the centre. After a conversation, found out that this elderly man had a fall and hit his head, had been to see a doctor and diagnosed that he had bleeding inside the brain, the so called “stroke”. Having all the volunteers enthusiastically applying adjustments for him, he then felt quite comfortable. Therefore, everyday he comes for adjustments, his condition seems following his confidence and frequent treatments. Within two weeks he has shown significant improvement, able to walk steadily on his own, without the help of his family members and without the use of walking stick, this made him feel the confidence and energy back in his life.

There were patients suffering from similar “stroke”, not everyone is as lucky, in my relatives and friends I have met, unable to walk, unable to speak properly. Although been treated with conventional medicine, but waste a lot of time, very often are unable to walk properly as a complication. Longevity is wonderful, when any illness or accident happens, have adjustments as soon as possible, would recover very quickly, like this old gentleman who made a good recovery. This elderly man had another wonders on him, after 2 months of adjustments, one day morning has was combing his hair, he saw the root of the hair has a dark thing he could not get rid off, then he asked his family members, they started to laugh, because it is the hair turning black, it is not dark. This proved Longevity treatment not only able to activate cells, increase the metabolism, also enabling old cells to grow again.

With the proof mentioned above, hoping everyone and this elderly man having this good fortune, to have the blessing of Longevity, keep well and healthy, forever safe and happy, healthy is the best present to the family, also hope everyone” love in Longevity and happy with Longevity”.

Symptoms and adjustments : Stroke – all the chakras and affected area.
