

**Weakening of throat muscles, secretions
flowing out like a fountain.**

Learner : Mrs. Wu

Address : Taipei city, Taan district.

Tel: +886-2-23211478

I am a retired old person, and have a daughter who is suffering from mild form of schizophrenia, because of her and of my own health, have been working very hard to learn Longevityology. When I was young and healthy, had to work to make money for living, now I have retired, using money to buy back health! When I was feeling my health was going downhill _ it is really a blessing from Buddha, so lucky to have come across “Longevityology” _ a blessing from the universe, sending Buddha _ teacher Lin and teacher Wei and all the volunteers, teaching me guiding the universal energy, healing my ailments, making improvement with my health _ AMITABHA!

The most obvious was my throat was weakening; the first day of primary course had the chakras opened, went home, and started to apply adjustments to myself. One hand placed on C7, one hand on throat; then one hand on C5, one hand on throat, as a result, as soon as adjustments completed, the secretion flowing out like a fountain (this proved that my hands with the universal energy producing some sort of function!) Two weeks later, no matter when or what, even swallowing saliva would have slight choking sensation, like a miracle it got better! Five weeks later, the saliva is not flowing out like a fountain anymore, back to normal.

I applied adjustments for my daughter to C7, C6 and the whole head, such as left side of the brain, right side of the brain, back of the brain and neck area. Also applied adjustments to C5, C4, C3 and C2 (to prevent side effects of the drugs), after adjustments, she slept well, it is a pity that she is hospitalised, not possible to go and apply adjustments for her everyday _ pity! Being old and when your bladder is full, is difficult to hold, especially on a public transport, now I only have to place one hand on C2, within 3 seconds, and it holds, no leaking of urine. I am very grateful.

Symptoms and adjustments : Weakening of throat muscles – C7 + C5 + throat.

Schizophrenia – C7 + C6 + whole head.

Urinary incontinence – C7 + C3 + bladder.
